Barrel Guards for ANSI Pumps

Recommendations:

Barrel Guards for ANSI Pumps are nonmetallic guards that will not dent or rust. These cantilevered guards bolt directly to the rear of the power frame of the pump and expanded to the face of the motor. Uniguard Barrel Guards are available for many ANSI model pumps which fit Goulds, Durco, Sulzer, Fybroc and many other ANSI pumps.

- Eliminates the need to drill base plate to install this guard by using existing pump bolt holes.
- Installs in just a couple of minutes and can be easily removed without detaching the adapter COG ring from the pump frame.
- Optional inspection windows are easily installed for visual inspection of rotating components and access to lubrication points after guard has been fully expanded to the face of the motor.
- UV protected for outdoor use.
